To Whom It May Concern:

Smart Chemical Solutions, a Delaware limited liability company, and its wholly owned subsidiary Genesis Custom Chemical Blending, LLC, has entered the hand sanitizer market with products compliant to the FDA over-the-counter (OTC) pharmaceutical standards. To ensure the safety and quality of its new product line to pharma standards, Genesis, a long-time manufacturer, specializing in chemical blending, has expanded its quality management system to comply with FDA's cGMP standards. We have assembled a cross-functional team at Genesis and put together a comprehensive approach to cGMP, including:

Product Development and Process Scale-up, led by our Technical organization
Quality Assurance and Quality Control as an independent function within Genesis
Sourcing and Supply Chain expertise to ensure pharma grade materials and supplier quality
ERP, Batch Ticketing, Lot Control and a Warehouse Management system to ensure only the proper materials are used in our OTC pharma products
Procedure-based manufacturing processes, QC checkpoints and batch ticket reviews lead by our Manufacturing and QC organizations

As of June 1, 2020 we have established these expanded quality procedures and have self-certified our compliance to cGMP through our management review process, led by the President of the Company and regular self-audits, led by a long-time food-grade operations and quality expert. We have the proper programs in-place for the sanitation and maintenance of our facilities and the calibrations of our critical-to-quality testing equipment and process control.

We are doing our part at Genesis by leveraging our deep knowledge of chemical blending and adding cGMP capabilities to help limit the spread of COVID-19. We are planning a 3rd party audit and certification on July 10th in order to demonstrate our compliance to cGMP. If there are any questions or if clarification is needed regarding our current registration status, additional
